

COMP 125

Visual Information Processing with Google App Inventor

Dr. William L. Honig
Loyola University Chicago

App: Mole Mash Variant v1, v2

Overview

From the text Chp 3 the complete app, but adding variations 1 and 2: "Add buttons...move faster and slower", and "Add a label to keep track...."

What you need to do

Take some time to understand how the app works without the variant. Think about how you need to make the change.

1. What do you need to add?
2. What goes into the Designer?
3. What changes in the Blocks Editor?

How and What to turn in

Submit your complete project source file. See <http://people.cs.luc.edu/whonig/comp-125/assignments/GradingLabsAndAssignments.pdf/view>

Mac Users: follow the special steps carefully; See <http://people.cs.luc.edu/whonig/comp-125/assignments/HowToForMacDownloadSource.pdf/view>

Grading

20 points in Assignments for a fully working app with all the right features. -2 for any missing component in the Designer. -5 for any feature not fully working. -10 for not doing any variant required.
