How do large teams create high quality software on time?
Want to predict how many bugs are in your software?

Learn the Team Software Process (TSP) from SEI – as used by major worldwide companies (Microsoft, Intuit, Boeing, Allied Signal, Lockheed Martin, NAVAIR, and SAIC).

This is the class where I show you how things are done in industry and share my personal R&D experiences. It’s been some time since I’ve taught Software Engineering and it will be great to see you in class.

You will work together with a team on a large software project, complete multiple releases, plan and evaluate your work and your team. By the end of the course you will know what it’s like to be a software engineer in a leading company!
